EDUCATION

Utrecht Universiteit

Master, Mathematical Sciences (120 ECTS)

09/2024 - 07/2026

- Master thesis with Martijn Kool and Olivier de Gaay Fortman on Matroidal Degenerations of Prym Varieties and the Integral Hodge Conjecture.
 - * Built a bridge between degenerations of Prym varieties and cosigned-graphic matroids
 - * Provided numerous classes of new counterexamples to the integral Hodge conjecture for abelian varieties
- In the Algebraic Geometry and Number Theory track, with courses including:
 - * Hodge theory
 - * Topos Theory: Sheaf Cohomology
 - * Algebraic Stacks
 - * Elliptic Curves
 - * ∞ -categories
 - * Standard courses in algebraic geometry, algebra and topology
- Average grade: 8.2.
- Attended the conference: Abelian Varieties and their Moduli in Barcelona.
- Regularly attending the AG Seminar with in particular the Wallcrossing Seminar.

Eindhoven University of Technology

Bachelor, Applied Mathematics (180 ECTS)

09/2020 - 02/2024

- Graduated with a 9.5 for thesis on "Grothendieck Topologies on the Category of Finite Probability Spaces" with Jim Portegies.

Bouwens van der Boije College

Highschool, Atheneum

09/2014-06/2020

- C2 track: Fast Lane English

PROFESSIONAL EXPERIENCE

ASML

Veldhoven, Netherlands

(Independent) Internship

03/2024 - 09-2024

- Created an energy consumption model of all EUV machines of all customers of ASML with 98% accuracy. (Reference: Dirk De Brouwere-Hendrikse, dirkys@gmail.com)

Sowiso

Amsterdam, Netherlands

Translator

09/2024 - Present

- Translating mathematics courses aimed at universities from Dutch to English and vice versa. (Reference: Paula Beukers, p.beukers@paragin.com)

TALKS

- (Oct 2025) Wallcrossing seminar: Basics of geometric invariant theory in moduli problems
- (Feb 2024) DutchCATS: Grothendieck Topologies on the Category of Finite Probability Spaces
- (Nov 2023) CASA Day: Models for Synthetic Calculus (Pdf)
- (2025-2026): Various talks in reading courses

RELEVANT SKILLS

Programming:

- Python: Learnt in the following projects,
 - modeling tsunamis
 - diagnosing thoracic disorders in X-ray images
 - predicting burglaries in the borough of Barnet
 - hunger prediction in South Sudan
 - internship at ASML
- Sage: Learnt in the mastermath course on Elliptic Curves and the course Algebraic Number Theory
- C++: Created a spoon which lit up when soup is too hot to eat. Was based on a heat prediction model because the sensors were not quick enough

Languages:

- Dutch
- English

Misc.

- Powerlifter competing in IPF
- Wine grower
- WSET Level 2 Award in Wines
